

ABSTRACT OF THE DISCLOSURE

Methods and pharmaceutical compositions for protecting pharmaceutical compounds

5 (or drugs) in acidic environments are provided. Methods of treatment using formulations capable of protecting pharmaceutical compounds in acidic environments are also provided. Formulations provided generally comprise a therapeutically effective amount of at least one pharmaceutical compound, and a pharmaceutically acceptable protectant. The pharmaceutically acceptable protectant of the invention generally comprises a water-soluble
10 acid neutralizer, and a water-insoluble acid neutralizer.
